DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 7-9,11,13-17,20-22,24,25, are rejected under 35 U.S.C. 103(a) as being unpatentable over USP 4,996,736 (Nusser et al.) in view of EP 1208786.

Nusser et al. disclose a vacuum cleaner having a housing 1 having a dust chamber 2a for holding a dust separator, a motor/fan chamber zone 2 for holding a motor/fan unit and a receiving chamber in the form of a depression (col. 1, lines 47-52) for accessories positioned above the cover 3 for holding vacuum parts. The cover does not extend around the sidewalls of the cleaner as claimed. Figure 1 shows that the chamber extends from one sidewall to the other. Though the chamber is not positioned directly below the motor/fan chamber 2, the receiving chamber from a vertical perspective is considered to be lower and therefore below the motor/fan unit. The EP patent discloses a similar horizontally disposed canister cleaner (1) having a storage compartment on a sidewall of the cleaner with a flap 7 pivotally hinged to the sidewall. It would have been obvious to one skilled in the art that the depression in the underside of the Nusser et al. cleaner could be accessible via a sidewall opening as shown in the EP patent.

Claims 12,18,19 specify openings on each sidewall. The EP patent shows an opening on one sidewall.

In re Harza, 274 F.2d 669, 124 USPQ 378 (CCPA 1960) Although the reference did not disclose a plurality of ribs, the court held that mere duplication of parts has no patentable significance unless a new and unexpected result is produced. The claimed "second opening" is considered to be a mere obvious duplication of the opening in the sidewall shown in the EP patent.

Claims 10,23,26, are rejected under 35 U.S.C. 103(a) as being unpatentable over USP 4,996,736 (Nusser et al.) and EP 1208786 as applied to claims 7,13, and 24 above, and further in view of the abstract of JP 11107653 A.

The abstract of the JP patent discloses the use of a louver door which is displaceable with respect to the housing in the plane of a sidewall of the housing (see figures). Accordingly, it would have been obvious to one skilled in the art to substitute the louver door in the JP patent abstract for the door 7 in the EP patent in view of the use of the doors for providing an opening in the sidewall of the housing.
